

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A portable display device comprising:

a first panel having a front surface and a rear surface;

a second panel movably coupled to the first panel and having a front surface and a rear surface, the first and second panels movable between a manufactured position in which the first and second panels are substantially coplanar, and an operative position in which the first and second panels are angled with respect to one another; and

a marquee surface integral with the first and second panels such that when the first and second panels are coplanar in the manufactured position, the marquee surface is substantially coplanar with the first and second panels, and when the first and second panels are angled with respect to one another in the operative position, the marquee surface can be pushed out of the plane and project away from the first and second panels, wherein at least a portion of the marquee surface is positioned below a top of the display device when the marquee surface is in the manufactured position.

Claim 2 (Original): The portable display device of claim 1, further including a third panel coupled between the first and second panels such that the first panel is movably coupled to the third panel and the second panel is movably coupled to the third panel.

Claim 3 (Original): The portable display device of claim 2, wherein the first and second panels can fold inwardly over the third panel, such that when the first and second panels are folded inwardly, the first and second panels overlap each other.

Claim 4 (Original): The portable display device of claim 1, wherein the first panel is separated from the second panel by a side hinge line to permit relative movement between the panels.

Claim 5 (Original): The portable display device of claim 4, wherein the side hinge line includes a deformed area.

Claim 6 (Original): The portable display device of claim 4, wherein the side hinge line includes a cut extending through one of the front or rear surfaces of the first and second panels.

Claim 7 (Original): The portable display device of claim 1, wherein the marquee surface is located at a top of the first and second panels.

Claim 8 (Original): The portable display device of claim 1, wherein the marquee surface projects outwardly from the front surfaces of the first and second panels.

Claim 9 (Original): The portable display device of claim 1, wherein outer sides of the first and second panels are at least partially curved.

Claim 10 (Original): The portable display device of claim 1, further comprising a footer integral with and movably coupled to at least one of the first and second panels.

Claim 11 (Currently Amended): A portable display device comprising:

- a first panel;
- a second panel;
- a third panel coupled between the first panel and the second panel such that the first panel is movably coupled to the third panel and the second panel is movably coupled to the third panel, each of the first, second, and third panels having a front surface and a rear surface, the first and second panels movable between a manufactured position in which the first and second panels are substantially coplanar with the third panel, and an operative position in which the first and second panels are angled with respect to the third panel; and
- a footer integral with and movably coupled to the third panel, the footer being oblique to the third panel when the first and second panels are in the operative position.

Claim 12 (Original): The portable display device of claim 11, further comprising a first bottom brace integral with and movably coupled to the first panel, and a second bottom brace integral with and movably coupled to the second panel.

Claim 13 (Original): The portable display device of claim 12, wherein the first panel includes a first lower hinge line, and wherein the first bottom brace is movably coupled to the first panel along the first lower hinge line.

Claim 14 (Original): The portable display device of claim 12, wherein the second panel includes a second lower hinge line, and wherein the second bottom brace is movably coupled to the second panel along the second lower hinge line.

Claim 15 (Original): The portable display device of claim 12, wherein the portable display device comprises one piece of material, and wherein the one piece of material is rectangular such that the length of the first panel plus the first bottom brace is equal to the length of the third panel plus the footer.

Claim 16 (Original): The portable display device of claim 11, further comprising a marquee surface integral with the first and second panels and projecting away from the first and second panels.

Claim 17 (Original): The portable display device of claim 11, wherein the third panel includes a footer hinge line, and wherein the footer is movably coupled to the third panel along the footer hinge line.

Claim 18 (Original): A method of setting up a portable display device formed of a single piece of material, the method comprising:

folding a first panel of the material inwardly toward a center of the material along a first side hinge line;

folding a second panel of the material inwardly toward the center of the material along a second side hinge line;

extending a marquee surface away from the first and second panels in one of a first or a second direction;

extending a footer away from the first and second panels along a footer hinge line in the first direction;

extending a first bottom brace away from the first panel along a first lower hinge line in the second direction; and

extending a second bottom brace away from the second panel along a second lower hinge line in the second direction.

Claim 19 (Original): The method of claim 18, wherein extending the first and second bottom braces away from the first and second panels in the second direction includes extending the first and second bottom braces in a direction opposite to the first direction.

Claim 20 (New): A portable display device comprising:

 a first panel having a front surface facing in a direction, and a rear surface;

 a second panel movably coupled to the first panel and having a front surface and a rear surface, the first and second panels movable between a manufactured position in which the first and second panels are substantially coplanar, and an operative position in which the first and second panels are angled with respect to one another; and

 a marquee surface integral with the first and second panels and having a front surface that faces in substantially the same direction as the front surface of the first panel in both the manufactured and operative positions.

Claim 21 (New): The portable display device of claim 20, further including a third panel coupled between the first and second panels such that the first panel is movably coupled to the third panel and the second panel is movably coupled to the third panel.

Claim 22 (New): The portable display device of claim 21, wherein the first and second panels can fold inwardly over the third panel, such that when the first and second panels are folded inwardly, the first and second panels overlap each other.

Claim 23 (New): The portable display device of claim 20, wherein the marquee surface is located at a top of the first and second panels.

Claim 24 (New): The portable display device of claim 20, wherein the marquee surface projects outwardly from the front surfaces of the first and second panels.

Claim 25 (New): The portable display device of claim 20, further comprising a footer integral with and movably coupled to at least one of the first and second panels.
